VWPE STAINLESS STEEL PRINTER ENCLOSURE

The VWPE Printer Enclosure is designed to protect printers that are located in wet and harsh environments. With a strong and robust construction our UK made printer enclosures are built to last and feature a sleek flow through design to minimise water and bug traps. The VWPE's locking mechanism is easy to use allowing quick access to the printer for label changing. The lid locks securely at multiple heights so it can remain open while the printer is in use. For additional water and dirt protection, the enclosures are sealed with a double gasket and IP68 glands. A front latch secures the printer during cleaning and hygienic washdown. Although the VWPE is designed for Zebra printers as standard, we are able to supply enclosures for all printer manufacturers.

KEY FEATURES

- Fully stainless steel waterproof enclosure
- Made in the UK to highest quality standards
- Strong, robust and stylish housing with flow through design to minimise water traps
- Easy to use locking mechanism for adjustable height lid and easy access
- Sealed with double gasket and IP68 glands
